

Formula One

A Comprehensive Visualisation And Analysis

Introduction

Formula 1 is a high-speed motorsport that involves single-seater cars racing against each other on tracks.

Overseen by the Federation Internationale de L'Automobile and hosts a series of Grand Prix events across the globe

Singapore Grand Prix is a crucial component to our tourism industry, attracting a significant number fans who flock to the Marina Bay Circuit every year

Motivation

Our motivation was driven by two factors: Firstly, the sheer amount of data on formula one which made analysis or understanding a difficult task. Secondly, the lack of comprehensive visualisations available online. While there is a lot of information and data out there, it is often scattered across multiple sources, making it difficult to gain a complete picture of each race.

Objectives

- (1) To develop an all-in-one F1 dashboard that visualizes the data in a user-friendly and interactive way
- (2) To provide fans with a centralized platform to access and explore F1 data, allowing them to gain valuable insights into the sport
- (3) To create a tool that serves as a valuable resource for analysts, journalists, and teams to track performance and make informed decisions based on the data.

Approach

Visualisation approach

- Sourced information from kaggle (14 csv files)
- Datasets included information on the Formula 1 races, drivers etc from 1950 to the latest 2023 season.

Data Preprocessing

- Used excel to perform basic cleaning
- SQL was utilised for more complex queries.

EDA

- Performed basic univariate analysis on each selected metric individually using visualisations

Dashboard Planning

- Brainstorming and sketching out ideas
- Identifying the KPI's
- Our primary tools for data visualisation were Tableau and R

Dashboards

Ferrari	Alonso	1
	Massa	1
	Bottas	1

History

Seasonal Point Progression

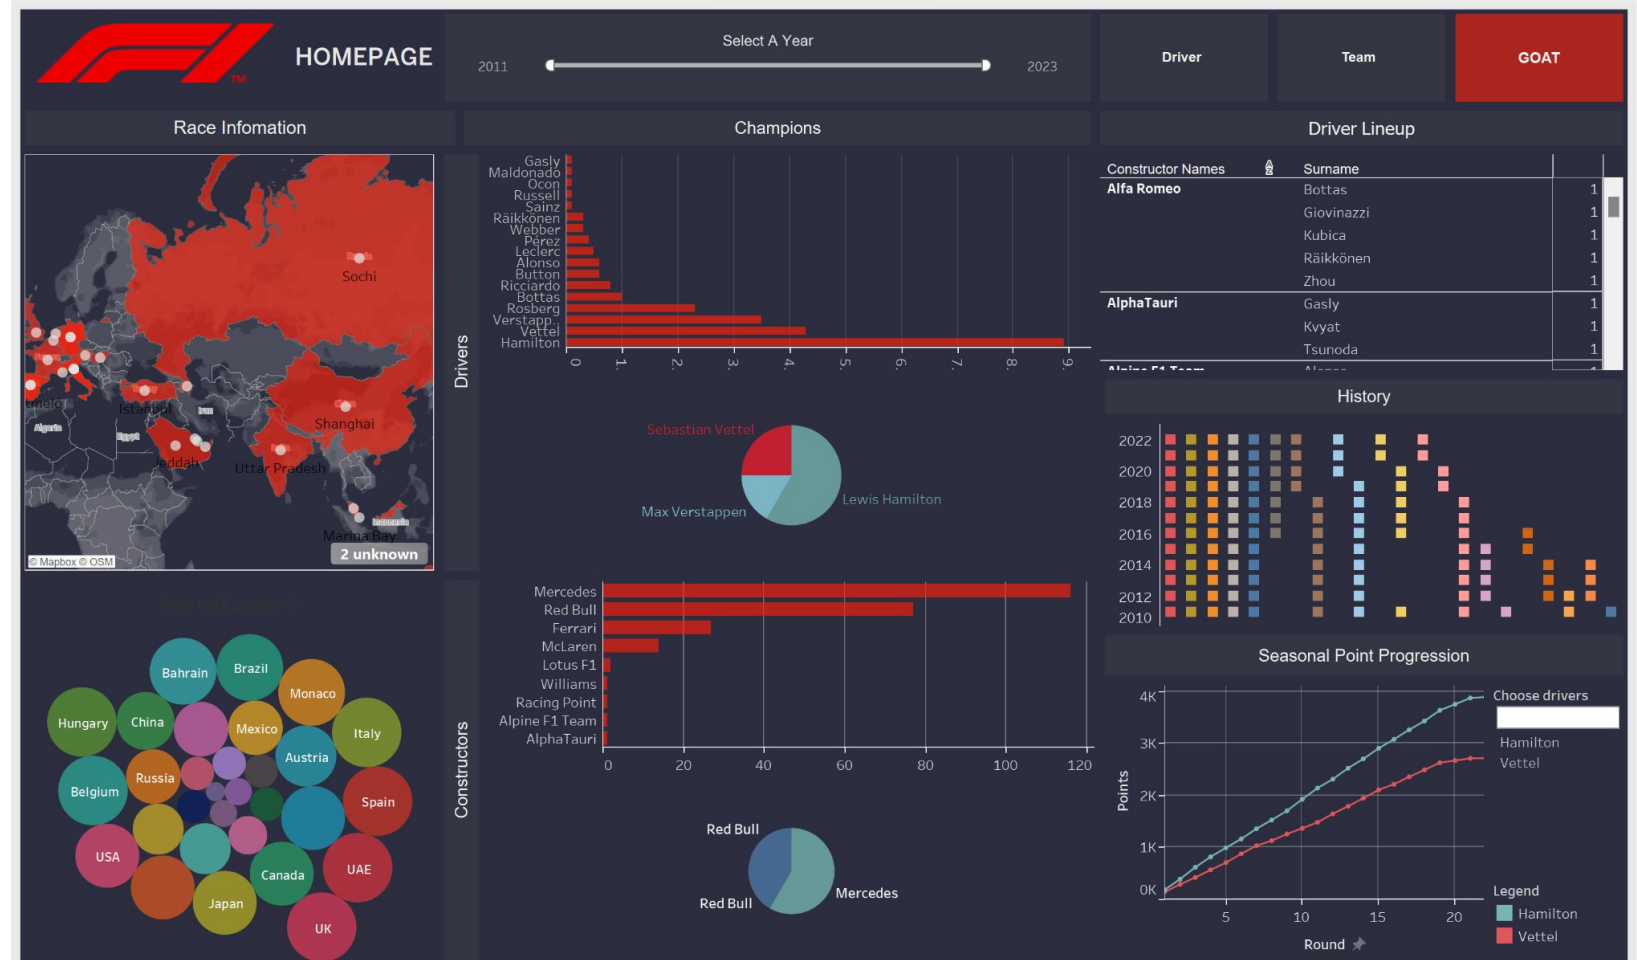

Homepage Dashboard

Lewis Hamilton is the GOAT -
was the champion 9 times
from 2011-present

Mercedes participated the
most and was also the
champion from 2011-present

Italy, Spain, UAE, UK held the
most races from 2011-present
(13 races each)

#2 Driver Dashboard

What it conveys

The overall performance of drivers based on year, location of race track, fastest lap speed, position order, fastest lap

What we want to analyse

Track and compare drivers performance metrics in a race that contribute to the driver's career progression based selected race(s), year, driver(s)

Sebastian Vettel

GOAT Dashboard

Apart from Hamilton, the other 4 drivers have different comparative strengths

Verstappen is on trajectory to becoming the most successful driver by age

A large disparity exists between Hamilton and the rest in terms of comprehensive success

Final Takeaways

01

Wide range of Application

Due to the highly technical nature of data in F1, along with the focus on engineering and strategy - there is a lot of scope for using visualisations and its insights to better improve team/driver performance.

02

Consistency is Key

It is possible to see through the visualisations that any champion (driver/team) in a given year or the GOAT, are consistently better than their rivals across all performance indicators. This shows the competitive nature of F1.

03

Every career has its upward slope and eventual slow-down

Even the all-time greats, the multiple-world champions, the consistently dominant teams experience the general life-cycle: A rise, a plateau and then a downfall.

There are a few exceptions.
